

Please read this manual before installation and use.

GENERAL

It composed of wafer type butterfly valve and pneumatic actuator.

Actuator

Double-acting type
PND / TAD

Single-acting type
PSO / TAO (Airless SHUT)
PSC / TAC (Airless OPEN)

Valve

- F type FCD450 body.
- FN type FCD450 body.
- FE type Aluminum alloy diecast body. (lightweight)
- FP type For Corrosion resistance. (Polypropylene body)

PRESSURE & TEMPERATURE RATING

F / FN		
Seat material	Fluid temp.	Use
EPDM	-20 to +80 °C	
NBR	-10 to +60 °C	
FKM	-5 to +80 °C	

- NOTE)
- EPDM is not recommended for hydrocarbon-based oil or grease.
 - Hot water can be used at temperatures of up to 80 °C (FE: 90 °C). Steam cannot be used.
 - CAC703 and EPDM are suitable for seawater. (F / FN)

INHERENT FLOW CHARACTERISTIC

PNEUMATIC ACTUATOR SPECIFICATIONS

PND type

Classification	Double-acting type			
Actuator type	PND-03S	PND-03D	PND-04D	PND-05D
Weight [kg]	0.2	0.3	0.5	0.8
Air consumption [ℓ] (round-trip)	0.05	0.08	0.19	0.35
Operation time [s]	Less than 1.			
Operation	SHUT by air to port A. ↔ OPEN by air to port B.			
Air pressure	0.4 to 0.7 MPa			
Piping connection	Rc 1/8			
Method of operation	Scotch yoke			
Housing material	PPS resin			
Ambient temperature	-10 to 50 °C (Please be careful when you use in 5 °C or less, so that there no freeze.)			
Manual operation	Operates the upper shaft of the actuator directly.			

PSO PSC type

Classification	Single-acting type (Spring-return)				
Actuator type	PSO - 03S PSC - 03S	PSO - 03D PSC - 03D	PSO - 04D PSC - 04D	PSO - 05D PSC - 05D	PSO - 05W PSC - 05W
Weight [kg]	0.2	0.4	0.6	1.2	1.8
Air consumption [ℓ] (round-trip)	0.03	0.04	0.1	0.2	0.53
Air exit	One side	Both sides			
Operation time [s]	Less than 1.				
Operation	PSO : OPEN by air to intake port. ↔ SHUT by spring-return. (Airless SHUT) PSC : SHUT by air to intake port. ↔ OPEN by spring-return. (Airless OPEN)				
Air pressure	0.4 to 0.7 MPa				
Piping connection	Rc 1/8				
Method of operation	Scotch yoke				
Housing material	PPS resin				
Ambient temperature	-10 to 50 °C (Please be careful when you use in 5 °C or less, so that there no freeze.)				
Manual operation	No manual operation.				

PNEUMATIC ACTUATOR SPECIFICATIONS

TAD type

Classification	Double-acting type						
Actuator type	TAD-040	TAD-050	TAD-063	TAD-080	TAD-100	TAD-125	TAD-160
Weight [kg]	0.9	1.3	2.1	3.4	6.1	9.8	18.2
Air consumption [ℓ] (round-trip)	0.11	0.18	0.34	0.66	1.36	2.72	5.56
Operation	SHUT by air to port A. ↔ OPEN by air to port B.						
Air pressure	0.4 to 0.7 MPa						
Piping connection	Rc 1/8	Rc 1/4					
Method of operation	Rack-and-pinion	Scotch yoke					
Housing material	Aluminum alloy						
Ambient temperature	-10 to 50 °C (Please be careful when you use in 5 °C or less, so that there no freeze.)						
Manual operation	Operates the upper shaft of the actuator directly.						

TAO TAC type

Classification	Single-acting type (Spring-return)						
Actuator type	TAO-040 TAC-040	TAO-050 TAC-050	TAO-063 TAC-063	TAO-080 TAC-080	TAO-100 TAC-100	TAO-125 TAC-125	TAO-160 TAC-160
Weight [kg]	2.3	3	4.9	8.5	16.4	27.6	51.2
Air consumption [ℓ] (round-trip)	0.23	0.34	0.67	1.26	2.62	4.44	8.77
Operation	TAO : OPEN by air to intake port. ↔ SHUT by spring-return. (Airless SHUT) TAC : SHUT by air to intake port. ↔ OPEN by spring-return. (Airless OPEN)						
Air pressure	0.4 to 0.7 MPa						
Piping connection	Rc 1/4						
Method of operation	Rack-and-pinion	Scotch yoke					
Housing material	Aluminum alloy						
Ambient temperature	-10 to 50 °C (Please be careful when you use in 5 °C or less, so that there no freeze.)						
Manual operation	No manual operation.	Option: MT (Manual handle unit)

PNEUMATIC ACTUATOR SPECIFICATIONS

SOLENOID VALVE (Applicable Pneumatic Actuators: PND-05D, TAD TAO TAC)

Classification (□: Voltage code)			Code	
5-port Solenoid Valve Return (with bypass valve)	Lead wire	4N3S102K-L□	N43SL□	□: Voltage 1 : 100V AC 3 : 200V AC 5 : 24V DC
	DIN Connector	4N3S102K-D□	N43SD□	
	DIN Connector (with lamp)	4N3S102K-N□	N43SN□	
	Watertight cover	4N3S102K-W□	N43SW□	
5-port Explosion proof solenoid valve Return (with bypass valve)	Conduit	4N4S102K-E01-H□B0-R	4N4S01-□B0, NO	
	Flame proof packing (Cable size Φ9.5 to 10.4 mm)	4N4S102K-E10-H□B0-R	4N4S10-□B0, NO	

Operate by solenoid valve (Normally Open)

PND / TAD	SHUT by solenoid off. ↔ OPEN by power to solenoid.
PSO / TAO (Airless SHUT)	OPEN by power to solenoid. ↔ SHUT by solenoid off. (Spring-return)
PSC / TAC (Airless OPEN)	SHUT by power to solenoid. ↔ OPEN by solenoid off. (Spring-return)

INSTALLATION, OPERATION & MAINTENANCE INSTRUCTIONS

HANDLING & STORAGE

① HANDLING

Do not drop or throw the product as it may break.

② STORAGE

- Store away from dust, moisture and direct sunlight. If possible, store in the original package.
- Do not remove a dust proof cap until the piping.

③ CHECKING

- Check the product code before installation.
- Make sure that the bolts are not loose.

INSTALLATION

① PRECAUTIONS

- Flush the pipeline carefully before installing the valve. Foreign particles, such as sand or pieces of welding electrode, will damage the disk and seats.
- Seat has ribs for tight gasket seating. Do not use gasket.
- Valve is shipped closed. (PSC is open.) (TAC is closed with a manual unit. Without a manual is open.)
- The butterfly valve should be piped upstream of the elbow. When piping downstream from the elbow, considered a straight line that is at least five times the length of the pipe.

- The valve stem should be mounted perpendicular to the flow for biased fluid.
- Disc interference may also occur when valve is installed in pipeline with smaller than normal inside diameter such as thick wall pipe, or lining pipe. Suitable corrective measurement must be taken (taper boring the pipe or pipe liner, etc.)
- When you use a vinyl chloride flange, there is a caliber to be internal off the corners. Please cut off the corners with reference to the following. (F / FN)

Valve size [mm]		Chamfer [mm]
FN	F	
150	150	1.5
-	200	2.5
-	250	3
-	300	2

- Avoid oil or grease when using EPDM seat.

② PIPING FLANGES (F / FN / FE)

- Class JIS 5K and JIS 10K pipe flanges can be used for FN series. See the drawing below for centering the valve with bolts.

- Wafer type butterfly valve is put between two seats of flanged-end and tightened with long bolts.
- Before bolts are tightened, valve should be centered within the bolts to prevent possible disc interference or damage by contact with the pipe or flange.
- Tighten all bolts using crossover method to load the joint evenly.
- When using a resin flange, if the connecting bolt is tightened too much, the flange may deform and leak.

Recommended torque			
Valve size [mm]			Torque [N·m]
F	FN	FE	
050	050	040	20
065	065	050	
080	080	065	
100	100	080	
125	125	125	25
150	150	150	
200	200	200	
250	-	250	30
300	-	300	

INSTALLATION, OPERATION & MAINTENANCE INSTRUCTIONS

③ CAUTION ON PLASTIC VALVE (FP)

Flange connection

- Use same material as same as opposite piping flanged. For metal piping, use flanged washer and it is considered that there is no heavy piping stress.
- When the piping, wick gap between a pipe and a valve and a bending cause by an angle difference, it may cause switching incompatible breakage, and leakage from fluid.
- Shaft, face to face dimension distance and flanged angle unit correctly.
- Use the flanged bolt on by bolt side and nut side, tighten all bolts using crossover method to load the joint evenly.

Recommended torques	
Valve size [mm]	Torque [N·m]
FP	
040	20
050	
065	
080	
100	25
125	
150	
200	60
250	
300	

Expansion measure of pipe line

- Heat expansion occurs in pipe line depends on by temperature change after piping and temperature condition of internal fluid. Compression or contraction by heat stress acts also on a valve. Especially for metal piping, it happens to plastic valve as weak in intensity. Perform expansion treatment before or after a valve and it is considered that a burden is not placed on valve.

④ ENVIRONMENT

- Do not install in place where corrosive gas is present or where vibration is heavy (0.5 G or more).
- When radiant heat causes the surface temperature of the control unit to exceed 50 °C, provide an appropriate shielding plate.
- If there is a possibility that the fluid and drive part freeze, please take measures to prevent freezing.
- For single-acting type, prevent water and dust from coming into air exit.

⑤ POSITIONING

Should be positioned through 90° upward from horizontal. Provide space around the product to allow manual operation, inspection and replacement work.

AIR PIPING

- Pneumatic actuator has an air supply ports to operate piston.

Double-acting type

PND : Rc 1/8
Coupling OD
less than 14.5 Φ

TAD-040 : Rc 1/8
TAD-050 to 160 : Rc 1/4

Single-acting type

PSO / PSC : Rc 1/8
TAO / TAC : Rc 1/4

- Piping of double-acting type is connected by seal tape on PORT A / B. Piping of single-acting type is put seal tape only on the air intake port.
- PND / PSO / PSC: PPS resin air supply port may be damaged if over tighten, please lightly tighten by hand.
- Never put anything on the actuator or make it into a foothold.

INSTALLATION, OPERATION & MAINTENANCE INSTRUCTIONS

OPERATION

①AIR SOURCE

- Use the filtered dry air (less than 40 μ).
- Extra attention is needed where it's cold climate (below 5 °C).
- When air pressure is high, reduce it to standard pressure (0.4 to 0.7 MPa). Air pressure should not exceed 0.7 MPa during operation test.
- Capacity of compressor and air tank are to be calculated by capacity of piping and air consumption. A margin of 30% is required.

②TEST OPERATION

Check the operation of pneumatic actuator before fluid enters the piping.

Double-acting type	Stop the air from the air source. Release the residual pressure in the air cylinder. Open the air equalizer. Move the manual shaft of actuator with a wrench.
Single-acting type	Send the standard pressure air. Confirm the opening / closing operation by slowly moving the actuator.

③TESTING

After piping, check following points.

- Piping is correct.
- Air or fluid leakage from connection. Flow direction of air is correct.
- Air pressure is in the range.
- Nothing interferes with operation when limit switch or solenoid valve is attached.

④ATTENTION

The opening and closing operation of the pneumatic actuator is fast, which may affect the product life. Please adjust the operation time of pneumatic actuator using a speed controller.

Valve size [mm]	Adjustment of operation time.
Less than 040	More than 1 second
050 or more	More than 2 seconds

MANUAL OPERATION

- Double-acting; stop the air supply and do not leave the air inside of cylinder.
- Single-acting; cannot be operated manually.

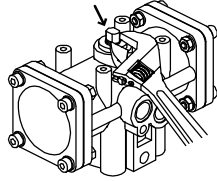

Optional code with the handle: TAO-MT / TAC-MT.

- Before automatic operation, be sure to remove wrench.

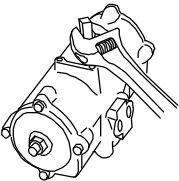

OPERATION (PND / TAD)

After turning air pressure to 0, turn manual shaft slowly with a smooth-jawed wrench to check the direction of OPEN/SHUT position.

Manual shaft

PND

TAD

MAINTENANCE

- Do the routine maintenance at least once in half a year.
- Do not set or take spring unit parts apart after installing the pneumatic single-acting actuator.

Can be used with no oil supply.

- Confirm the air leakage.
- Confirm the air supply pressure.
- Confirm the dirt or grit inside of cylinder.

Lubrication Procedure (TAD / TAO / TAC)
 In case of lubricating, use turbine oil or the equivalent through a lubricator. (ISO VG 32.46).
 Once lubricate, do the regularly.

Inspection items

- Confirm operation of opening and closing.
- Confirm whether screws are loose or not.
- Confirm the fluid temperature or pressure.
- Confirm the leak from valve stem.
- Confirm the bolt tightening torque.

INSTALLATION, OPERATION & MAINTENANCE INSTRUCTIONS**TROUBLESHOOTING**

Problem	Cause	Solution
Fail to operate.	Air doesn't come out.	Supply air.
	Air pressure is too low.	Adjust to standard pressure level.
Stop in the mid position.	There is a foreign object in the butterfly valve.	Remove a foreign object.
	Valve is distorted.	Replace the valve.
Leakage from valve seat	Damaged on valve seat.	Replace the valve.
		Replace the valve seat. (F)
Leakage from valve stem	O-ring is worn.	Replace the valve.
		Replace the O-ring (F)
