

## AE3 type Electric Actuator Specifications

### FEATURE

The high performance electric actuator developed for filtration machines the 5 way ball valve.

It drives into the position of each process by the change incoming signal of three processes of filtration, reverse flow, and cleaning.

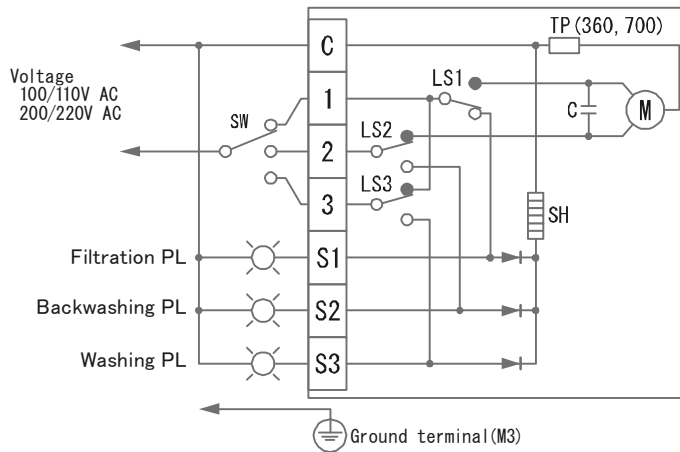

As for operation, raw water does not flow to a direct processing water side by positive and the inversion rotation system.

A regulation set up is possible for the Form L and Form R.

### SPECIFICATION

| Actuator type (□:Voltage code) |                           | AE3-120-□  | AE3-360-□          | AE3-700-□          |
|--------------------------------|---------------------------|--|--------------------|--------------------|
| Voltage                        |                           | 100 / 110 AC V $\pm$ 10 % 50/60 Hz (Code: 1)<br>200 / 220 AC V $\pm$ 10 % 50/60 Hz (Code: 2)   |                    |                    |
| Rated torque [N·m]             |                           | 12   | 36                 | 70                 |
| Operation time [s]             | Filtration → Reverse flow | 19 / 16 (50/60 Hz)   | 15 / 12 (50/60 Hz) | 30 / 24 (50/60 Hz) |
|                                | Reverse flow → Cleaning   | 14 / 12 (50/60 Hz)   | 11 / 9 (50/60 Hz)  | 22 / 18 (50/60 Hz) |
|                                | Cleaning → Filtration     | 5 / 4 (50/60 Hz)   | 4 / 3 (50/60 Hz)   | 8 / 6 (50/60 Hz)   |
| Power consumption [VA]         |                           | 19   | 60                 |                    |
| Motor                          |                           | Synchronous motor  | Reversible motor   |                    |
| Overload protection            |                           | Thermal protector  |                    |                    |
| Method of operation            |                           | Transfer input type  |                    |                    |
| Operation                      |                           | When SW1 is ON, it's Filtration. (Filtration PL is lit.)<br>When SW2 is ON, it's Reverse flow. (Reverse flow PL is lit.)<br>When SW3 is ON, it's Cleaning. (Cleaning PL is lit.) |                    |                    |
| Output signal rating           |                           | Resistance load 3 A 250 V AC (Minimum 0.1 A)   |                    |                    |
| Duty cycle                     |                           | 20 % 15 min.   |                    |                    |
| Ambient temperature            |                           | -20 to 55 °C   |                    |                    |
| Space heater                   |                           | Built in to the control board  |                    |                    |
| Manual operation               |                           | Manual shaft   |                    |                    |
| Enclosure                      |                           | Equivalent to IP65 (IEC 60529)   |                    |                    |
| Housing material               |                           | Aluminum alloy diecast (acrylic resin baking finish)   |                    |                    |
| Wire connection                |                           | Terminal Block: M3, Ground terminal: M3  |                    |                    |
| Conduct port                   |                           | 2-G1/2 Attachments: Cable gland (for $\Phi$ 6 to 12 mm cable), plug.   |                    |                    |

WIRING

- LS1 : Filtration limit switch
- LS2 : Reverse flow limit switch
- LS3 : Cleaning limit switch
- C : Condenser
- M : Motor
- SH : Space heater
- TP : Thermal protector
- PL : Pilot lamp

Note) Control switch should be prepared one by one for actuator.  
Do not operate two or more actuator from one switch. It might malfunction.

Operation (Top view of valve)
