

Valve Specification

The PA series is a lightweight plastic ball valve with excellent chemical resistance. Three connection methods, four different body materials, and two different O-ring materials are available to meet the requirements of the pipes and fluids. The combination of these valves can be used for a wide range of applications.

Specifications

Model	PA
Type	Plastic ball valve, Full-port
Structure	Floating ball valve
Fluid	Water, Chemicals, Sea water
Flow direction	Under 50A: With designated flow direction. Over 65A: Both directions
Application	ON-OFF
Max working pressure	1 MPa
Max allowable pressure	1 MPa

Production range

Connection	JIS 10K FF Flanged end				Threaded end Rc (JIS B 0203)				Socket end*1		
Body material	PVC	C-PVC	PVDF*2	PP*2	PVC	C-PVC	PVDF*2	PP*2	PVC	C-PVC	PP*1*2
Ball material	PVC	C-PVC	PVDF*2	PP*2	PVC	C-PVC	PVDF*2	PP*2	PVC	C-PVC	PP*1*2
Seat material	PTFE										
Stem seal material	EPDM O-ring / FKM O-ring										
Size	15A, 20A, 25A, 32A*1, 40A, 50A, 65A, 80A, 100A										

*1: There is no 32A in the socket type made of PP. *2: Semi-standard

Cv value

| Pressure & Temperature rating (PVDF)

| Pressure & Temperature rating (PP)

Notes for pipe design

- Do not use for gas or other compressible fluids.
- If hydrogen peroxide or other chemicals that tend to generate gas by decomposition are used, the gas generated may cause high pressure inside the valve and damage the valve.
- Always avoid areas where water or dust may be splashed or exposed to direct sunlight.
