Instruction manual

NIPPON VALVE CONTROLS, INC. Pneumatic Actuated Ball Valve A AE E EG T TE EL TV

SP-1522

Please read this manual before installation and use.

GENERAL

Doro

Threaded-end ball valve with pneumatic actuator.

Actuator Double-acting type PND TAD	Valve A type Brass mini ball valve. AE type Long neck.
Single-acting type (Airless: SHUT) PSO TAO	E type For general use.EG type For high temp. (up to 1 MPa)T type Brass mini ball valve.TE type Long neck.
Single-acting type (Airless: OPEN) PSC TAC	EL type For general use. TV type For diversion flow and mixing.

Note) When a closed path is exposed to high pressure, it may leak slightly to an open path.

3 way valve: SHUT / Position , OPEN / Position

	3			
Classification	Double-acting type			
Actuator type	PND-03S	PND-03D	PND-04D	PND-05D
Weight [kg]	0.2	0.3	0.5	0.8
Air consumption [<i>l</i>] (round-trip)	0.05	0.08	0.19	0.35
Operation time [s]	Less than 1.	·	·	
Operation	SHUT by air to port A.	\leftrightarrow OPEN by air to po	ort B.	
Air pressure	0.4 to 0.7 MPa			
Piping connection	Rc 1/8			
Method of operation	Scotch yoke			
Housing material	PPS resin			
Ambient temperature	-10 to 50 °C (Please b	e careful when you us	e in 5 °C or less, so tha	t there no freeze.)
Manual operation	Operates the upper sh	aft of the actuator dire	ctly.	

PND type

PSO PSC type

Classification	Single-acting ty	pe (Spring-return)			
Actuator type	PSO - 03S PSC - 03S	PSO - 03D PSC - 03D	PSO - 04D PSC - 04D	PSO - 05D PSC - 05D	PSO - 05W PSC - 05W	
Weight [kg	0.2	0.4	0.6	1.2	1.8	
Air consumption [{ (round-trip)	0.03	0.04	0.1	0.2	0.53	
Air exit	One side	Both sides				
Operation time [s	Less than 1.					
Operation		PSO : OPEN by air to intake port. ↔ SHUT by spring-return. (Airless: SHUT) PSC : SHUT by air to intake port. ↔ OPEN by spring-return. (Airless: OPEN)				
Air pressure	0.4 to 0.7 MPa					
Piping connection	Rc 1/8					
Method of operation	Scotch yoke					
Housing material	PPS resin					
Ambient temperature	-10 to 50 °C (PI	ease be careful v	/hen you use in 5 °	C or less, so that t	here no freeze.)	
Manual operation	No manual ope	ration.				

3 way valve: SHUT / Position , OPEN / Position

Classification	Double-acting type						
Actuator type	TAD-040	TAD-050	TAD-063	TAD-080	TAD-100	TAD-125	TAD-160
Weight [kg]	0.9	1.3	2.1	3.4	6.1	9.8	18.2
Air consumption [ℓ] (round-trip)	0.11	0.18	0.34	0.66	1.36	2.72	5.56
Operation	SHUT by air to port	SHUT by air to port A. ↔ OPEN by air to port B.					-
Air pressure	0.4 to 0.7 MPa						
Piping connection	Rc 1/8	Rc 1/4					
Method of operation	Rack-and-pinion	Scotch yok	(e				
Housing material	Aluminum alloy						
Ambient temperature	-10 to 50 °C (Please	e be careful	when you u	se in 5 °C o	r less, so tha	at there no fr	eeze.)
Manual operation	Operates the upper	shaft of the	actuator dir	ectly.			

TAD type

TAO TAC type

Classification	Single-acting type (Sprir	Single-acting type (Spring-return)					
Actuator type	TAO-040 TAC-040	TAO-050 TAC-050	TAO-063 TAC-063	TAO-080 TAC-080	TAO-100 TAC-100	TAO-125 TAC-125	TAO-160 TAC-160
Weight [kg]	2.3	3	4.9	8.5	16.4	27.6	51.2
Air consumption [l] (round-trip)	0.23	0.34	0.67	1.26	2.62	4.44	8.77
Operation		TAO : OPEN by air to intake port. \leftrightarrow SHUT by spring-return. (Airless: SHUT) TAC : SHUT by air to intake port. \leftrightarrow OPEN by spring-return. (Airless: OPEN)					_
Air pressure	0.4 to 0.7 MPa						
Piping connection	Rc 1/4						
Method of operation	Rack-and-pinion	Scotch yo	ke				
Housing material	Aluminum alloy						
Ambient temperature	-10 to 50 °C (Please be	-10 to 50 °C (Please be careful when you use in 5 °C or less, so that there no freeze.)					eze.)
Manual operation	No manual operation.	Option: M	T (Manual h	andle unit)			

3 way valve: SHUT / Position 1, OPEN / Position 2

SOLENOID VALVE (PND-05D) (TAD, TAO, TAC)

Classification			Code (□: Voltage)		
5-port Solenoid Valve Return (with bypass valve)	Lead wire	4N3S102K-L□	N43SL□	□: Voltage	
	DIN Connector	4N3S102K-D□	N43SD⊡	1 : 100V AC 3 : 200V AC 5 : 24V DC	
	DIN Connector (with lamp)	4N3S102K-N□	N43SN□		
	Watertight cover	4N3S102K-W□	N43SW□		
5-port Explosion proof solenoid valve Return (with bypass valve)	Conduit	4N4S102K-E01-H□B0-R	4N4S01-□B0, NO		
	Flame proof packing (Cable size Φ9.5 to 10.4 mm)	4N4S102K-E10-H□B0-R	4N4S10-□B0, NO		

Operate by solenoid valve (Normally Open)

PND, TAD	SHUT by solenoid off.	\leftrightarrow	OPEN by power to solenoid.
PSO, TAO (Airless: SHUT)	OPEN by power to solenoid.	\leftrightarrow	SHUT by solenoid off. (Spring-return)
PSC, TAC (Airless: OPEN)	SHUT by power to solenoid.	\leftrightarrow	OPEN by solenoid off. (Spring-return)

HANDLING & STORAGE

①HANDLING

Do not drop or throw the product as it may break. ②STORAGE

- Store away from dust, moisture and direct sunlight. If possible, store in the original package.
- Do not remove a dust proof cap until the piping. ③CHECKING
- Check the product code before installation.
- Make sure that the bolts are not loose.

INSTALLATION

OPRECAUTIONS

- Flush the pipeline carefully before installing the valve. Foreign particles, such as sand or pieces of welding electrode, will damage the ball and seats.
- For valves with specified flow direction (AE, EG) or with ST / SC option, check the arrows on the product before piping.
- When the flow path is subjected to a high pressure from arrow, it may leak slightly to the low pressure port. (T, TE, EL, TV)

②PIPING

- Using a pipe with too long a thread will damage the valve.
- If sealing tape or sealant gets inside the valve, the valve seat leaks or malfunctions.
- To prevent the valve from being damaged by stress, always hang a wrench on the end of the valve on the side where the pipe is to be connected when screwing in the pipe or when unscrewing it after correcting the angle (Fig a and b) and do not use a pipe wrench on the valve. Do not apply force to the actuator when working on the piping. (Fig. c)

 Refer to the recommended tightening torque table and do not apply excessive torque.

Valve size [mm]	Torque [N·m]
008 to 010	15 to 20
015	25 to 35
020	40 to 50
025	50 to 60
032	60 to 80
040	75 to 85
050	90 to 110

③ENVIRONMENT

- Do not install in place where corrosive gas is present or where vibration is heavy (0.5 G or more).
- When radiant heat causes the surface temperature of the control unit to exceed 50 °C, provide an appropriate shielding plate.
- If there is a possibility that the fluid and drive part freeze, please take measures to prevent freezing.
- For single-acting type, prevent water and dust from coming into air exit.

@POSITIONING

Should be positioned through 90° upward from horizontal. Provide space around the product to allow manual operation, inspection and replacement work.

AIR PIPING

• Pneumatic actuator has an air supply ports to operate piston.

: Rc 1/8

Double-acting type PND : Rc 1/8 Coupling OD less than 14.5 Φ

TAD-050 to 160 : Rc 1/4

Single-acting type

PSO, PSC : Rc 1/8

TAO, TAC : Rc 1/4

TAD-040

- Piping of double-acting type is connected by seal tape on PORT A / B. Piping of single-acting type is put seal tape only on the air intake port.
- PND, PSO, PSC: PPS resin air supply port may be damaged if over tighten, please lightly tighten by hand.
- Never put anything on the actuator or make it into a foothold.

INSTALLATION, OPERATION & MAINTENANCE INSTRUCTIONS

OPERATION

OAIR SOURCE

- Use the filtered dry air (less than 40 μ).
- Extra attention is needed where it's cold climate (below 5 °C).
- When air pressure is high, reduce it to standard pressure (0.4 to 0.7 MPa). Air pressure should not exceed 0.7 MPa during operation test.
- Capacity of compressor and air tank are to be calculated by capacity of piping and air consumption. A margin of 30 % is required.

©TEST OPERATION

Check the operation of pneumatic actuator before fluid enters the piping.

Double-acting type	Stop the air from the air source. Release the residual pressure in the air cylinder. Open the air equalizer. Move the manual shaft of actuator with a wrench.
Single-acting type	Send the standard pressure air. Confirm the opening / closing operation by slowly moving the actuator.

③TESTING

After piping, check following points.

- Piping is correct.
- Air or fluid leakage from connection. Flow direction of air is correct.
- Air pressure is in the range.
- Nothing interferes with operation when limit switch or solenoid damper is attached.

@ATTENTION

The opening and closing operation of the pneumatic actuator is fast, which may affect the product life. Please adjust the operation time of pneumatic actuator using a speed controller.

Valve size [mm]	Adjustment of operation time.
Less than 040	More than 1 second
050 or more	More than 2 seconds

MANUAL OPERATION

- Double-acting; stop the air supply and do not leave the air inside of cylinder.
- Single-acting; cannot be operated manually.

Optional code with the handle: TAO-MT, TAC-MT

• Before automatic operation, be sure to remove wrench.

OPERATION (PND, TAD)

After turning air pressure to 0, turn manual shaft slowly with a smooth-jawed wrench to check the direction of OPEN/SHUT position.

MAINTENANCE

- Do the routine maintenance at least once in half a year.
- Do not set or take spring unit parts apart after installing the pneumatic single-acting actuator.

Can be used with no oil supply.

- Confirm the air leakage.
- Confirm the air supply pressure.
- Confirm the dirt or grit inside of cylinder.

Lubrication Procedure (TAD, TAO, TAC) In case of lubricating, use turbine oil or the equivalent through a lubricator. (ISO VG 32.46). Once lubricate, do the regularly.

Inspection items

- Confirm operation of opening and closing.
- Confirm whether screws are loose or not.
- Confirm the fluid temperature or pressure.
- Confirm the leak from valve stem.
- Confirm the bolt tightening torque.

TROUBLESHOOTING

Problem	Cause	Solution
Fail to operate.	Air doesn't come out.	Supply air.
	Air pressure is too low.	Adjust to standard pressure level.
Stop in the mid position.	 Biting of valve seat. The scale has adhered to the valve ball. 	Remove a foreign object.
Leakage from valve body	 Valve cap get loose. Valve body is damaged. 	Replace the valve.
Leakage from valve seat	Seat is worn or damaged.	
Leakage from valve stem	Stem packing is worn or distorted.
